

Interactive comment on “A new permanent multi-parameter monitoring network in Central Asian high mountains – from measurements to data bases” by T. Schöne et al.

Anonymous Referee #1

Received and published: 11 September 2012

The authors have addressed all comments made and clarified some of the sections in more detail. They also added two new references, one being relevant for the scientific motivation. While the rebuttal satisfies the comments in general, there is a hint of avoidance in some of the answers. However, the manuscript should be published after all changes promised in the rebuttal are incorporated.
