Interactive comment on "Development of stroboscopic muography" *by* H. K. M. Tanaka

Anonymous Referee #1

Received and published: 14 September 2012

Tanaka has described a stroboscopic method involving cosmic ray muon radiography. He has demonstrated that the method may be useful for some periodic processes occurring in very large systems such as the example given of an electric furnace. It is also reasonably suggested that the method may be applicable to periodic flows in lava tubes which occur in some volcanoes.
