Going by both the respected reviewers comments I would like to change the title of the paper from "Fractal analysis of INSAR and correlation with graph-cut based image registration for coastline deformation analysis: Post seismic hazard assessment of the 2011 Tohoku earthquake region" to a more justifiable "Image registration for regional segmentation of remote sensed images: A case study of 2011 Tohoku earthquake

C197

region" which will be give a clearer picture of the work done.
