Interactive comment on "Comment on "Observing desert dust devils with a pressure logger" by Lorenz (2012)" by A. Spiga

Anonymous Referee #2

Received and published: 8 October 2012

The topic in this commentary is very timely due to the recent landing of the MSL on the surface of the Mars as there now is a pressure sensor on-board the spacecraft that should be able to bring the predicted pressure fluctuation periods to the test. It will be very interesting to see if the fluctuations discussed in this comment are observed.
