Received and published: 21 January 2014

Dear colleagues,

I can conclude that discussion in the article “Autonomous Thermal Camera System for Monitoring the Active Lava Lake at Erebus Volcano, Antarctica” by N. Peters, C. Oppenheimer, and P. Kyle is successfully finished and this paper is finally accepted for publication.

Without hesitation, geophysical field monitoring, especially in the hard-to-reach regions is very perspective and useful not only for International Scientific Community, but also for many Applied Branches.

C249

I want to thank the authors and reviewers for their fruitful work.

Yours truly,

Lev Eppelbaum
