

Interactive comment on “In-flight calibration of double-probe DC electric field measurements on Cluster” by Y. V. Khotyaintsev et al.

Anonymous Referee #3

Received and published: 30 April 2014

I recommend to accept the paper as it is. It must be accepted that for a presentation of data in Cluster Active Archive it is difficult to determine electric fields of 1-2 mV/m. I support Referee 2 concerning comparison with CIS and EDI (I mentioned this in my original report).
