We thank the reviewer for the kind comments and the lighthearted comments on our units. We have corrected the text of the paper to be consistent. In fact, we have two cables for the induction magnetometer, one about 60 meters in length (200 feet) and one about 200 meters in length (500 feet) that we have used in the deployments. This is what has given rise to the appearance of confusion in our writing. We have corrected the wording and appreciate the careful reading and for bringing this error to our attention.
