Received and published: 6 April 2016

We greatly appreciate the comments that we found in PDF, some take in consideration and changed the original manuscript. Some suggestions did not offer us much discretion to use them due the fact of changing the focus of this work, as already mentioned and a more technical publication aimed at this audience, this often in lacking in type for simple scientific information and easy access. We reached readings in this discussion phase, 761 views marked on the magazine. We respect the chosen reviewer position this discussion phase, however, many of his comments do not appear right to answer or the clarification, there were suggestions to change or request to rewrite. We adapted what we thought was best and we replaced the original manuscript.

Please also note the supplement to this comment:
