Interactive comment on "Video cascade accumulation of the total solar eclipse on Svalbard 2015" *by* F. Sigernes et al.

Anonymous Referee #3

I am personally impressed by the potentiality of the proposed method in fact the authors propose to use commercial cams for improving features from a set of images. It has a great impact on costs and consequently on the diffusion of the method all over the world. I have no specific comments on the paper it is well organized and presented. Also from a scientific point of view, it is relevant and correctly written.
