Interactive comment on "Analysis of the technical biases of meteor video cameras used in the CILBO system" *by* Thomas Albin et al.

Anonymous Referee #1

Received and published: 26 December 2016

This paper presents a review of the CILBO camera system 8 (Canary Island Long-Baseline Observatory) and the errors or biases that come from the system:Instrumental errors, algorithmic errors, and statistical errors.

Minor revisions: 1) please clarify limitations of simulation Monte Carlo 2) clarify future work 3) clarify how different the biases are 9) to investigate possible detection time correlations what coefficient has been used? clarify please. goodness-of-fit is only used to make sure the existence of these dependences
