1. In the test of harmonic distortion in Section 5.2, the description of theoretical knowledge is rather complicated. When the system is tested, it is necessary to pay attention to the display of test results and the theoretical knowledge should not be described too much. 2. Some charts in this article have no information. For example, the figure without information volume in figure 10 is not necessary to be placed in the text. It is recommended to streamline and ensure the refinement of the article. 3. The reference should be adjusted appropriately to ensure the same format.
