Interactive comment on "A Network of Magnetometers for Multi-Scale Urban Science and Informatics" *by* Trevor A. Bowen et al.

Anonymous Referee #3

The manuscript shows the results of 4 stations of magnetic sensors in an urban environment in order to research how the geomagnetic signals are affected by anthropogenic contributions . The mansucript is well organized and written. The methodology used and the results are very good described. Additionally, the authors have taken into account all the questions of others referees. In my opinion, the manuscript deserves publication.
