## Interactive comment on "A Network of Magnetometers for Multi-Scale Urban Science and Informatics" by Trevor A. Bowen et al.

## **Anonymous Referee #4**

Received and published: 1 April 2019

This manuscript shows an interesting work where an array of four magnetometers has been developed for the purpose of monitoring urban magnetic fields. The useful of this work is remarkable: the identification and reduction of noise in geophysical sensor networks which measure magnetic fields and seismic activity.

Therefore, I recommend the publication of this manuscript, because the results and very interesting and they are well explained, analyzed and supported.
