Interactive comment on "A Universal and Multi-dimensional Model for Analytical Data on Geological Samples" by Yutong He et al.

Anonymous Referee #2

Received and published: 4 June 2019

The paper presents a new model for analytical data on geological samples. It is a topic of interest to the researchers in the related areas. It suggests a new model which can accommodate comprehensive geoanalytical data and the related background information. Moreover, the data model has a very high efficiency for time and space use rate. The article presents a well-organized contents and describes the data model in a very legible way. The experiment shows the high performance of this model. In my opinion, the paper is good for published.
