GI-2020-49 revised manuscript

Dear Lev Eppelbaum / GI editors

We hereby submit the revised version of our manuscript, "Suppression of very low frequency noise in transient electromagnetic data with semi-tapered gates". We would like to thank the two reviewers for their acknowledging comments and their assessment of our work.

In the revised version, it is now explicitly stated in section 2.1, that figure 2 and the accompanying discussion refers to a single gate. Section 2.1 is expanded with a final paragraph commenting on the effects from repetitive sampling. The mathematics behind repetitive sampling is derived in a new appendix A at the end of the manuscript. These revisions are marked with blue in the annotated manuscript.
